

# AMEREC Steam Generators

## AK & 3K Series Generators: Creating the ultimate steambath environment

Amerec's AK & 3K generators set themselves apart from other residential generators with several unique features. "Soft Steam" function maintains the ultimate comfort zone. Minimal temperature variations and an even flow of steam are the two most important traits of the perfect steambath. The AK & 3K generators feature innovative "soft steam" element switching to maintain a consistent and comfortable steambath environment. The generators use full power to quickly heat up the steamroom to its preset temperature; then cut power to half their elements, resulting in a more consistent flow of soft billowing steam and more stable temperature. "Soft Steam" functions with K30 or K60 controls.

**K30**

The single factor most greatly affecting steam bathing comfort is minimal temperature fluctuations. Comparative testing proves the superior performance of "soft steam" element switching, a feature exclusive to the AK & 3K generators.

**K60**

The AK & 3K generators now feature four control options: The K60 and KT60 have a three button panel with on/off, temperature setting and time setting which can be adjusted up to 60 minutes. The digital display alternately shows room temperature and time remaining. The display window of the K30 lights up when the generator is on. Both the K60 and the K30 have remotely located thermostats. The K60T has a built in thermostat for easier installation and must be mounted inside the steamroom. The R30K is a simple on/off switch with a built-in 30 minute timer.

**R30K**

The optional automatic drain valve kit ADK automatically drains and flushes the tank after each steam bath.
